SINCE 1896

VALVE OPERATOR – NOW WITH COUNTER!

Count turns for valve exercising using Reed's new digital counter. No more hand-turning or counting!

- Counter for Reed Valve Operator **makes the job simpler** by keeping track of turns for the operator.
- The counter works by the magnet passing **two sensors** in the bottom of the counter module.
- When power drive runs **clockwise**, the counter numbers advance in a positive direction from 0 to 99999999. When power drive runs **counterclockwise**, the numbers decrease from 99999999 to 0.
- Clutch with counter can be retrofit to Reed Valve Operators already in the field.
